FOR IMMEDIATE RELEASE

ENTRÉ TECHNOLOGY GROUP WINS CONTRACT WITH FORTUNE 500 BIOMEDICAL COMPANY

FORT WORTH, Texas -- January 18, 2006 -- Entré Technology Group, a leading provider of OEM technology and embedded computing solutions, announced today that it was awarded a nationwide PC fulfillment project by a global, multibillion-dollar, broad-based health care company. The contract covers PC equipment used to remotely monitor, manage and service several lines of medical diagnostic instruments such as immunoassay systems and hematology analyzers. Entré will be relied upon to ship pre-configured PCs that are customized for each installation direct to the end-user location.

"We are very pleased to be awarded this contract. It demonstrates the confidence our clients have in our ability to act as an extension of their organization to serve their customers and markets," said Bob Clayton, President of Entré. "With this particular client we have maintained a 99.9% on-time and 99.9% quality rating on tens of thousands of units shipped since we became a certified supplier in 1990."

The contract calls for Entré to configure a Windows-based PC with site specific settings and ship it directly to the end-user location for installation by a Field Service Engineer. The PC operates in a "headless" configuration, which means it does not have a keyboard, mouse or monitor. The first article has already been approved and shipments are expected to begin by the end of January. Total unit volume and dollar value of the contract were not disclosed.

Entré Technology Group

Entré Technology Group provides OEM and embedded technology solutions to medical companies and labs throughout the United States, Puerto Rico, and Canada. The company has been under the same ownership and management since 1984. Today it offers more than 100,000 computer products to over 500 clients throughout North America.
